

PROFESSIONAL SUMMARY

Senior Power BI Developer and BI Consultant specialising in enterprise pharma and healthcare analytics for US organisations. 4 years of end-to-end BI delivery — 50% Power BI consulting + 50% Data Engineering on Amazon Redshift, Snowflake across two simultaneous US client engagements. Delivered platforms for a US pharma ophthalmology client (enrollment funnels, HCP engagement, call activity, payer analytics) and a US biotech CAR-T therapy client (registrations, apheresis, deliveries, customer details). 150+ users, 91 territories, 80%+ adoption.

CORE COMPETENCIES

Power BI

Desktop & Service · Advanced DAX · Power Query (M) · Dynamic RLS · Deployment Pipelines · DAX Studio · Tabular Editor · Dataflows

BI Consulting

Requirements Analysis · Stakeholder Management · UAT & SIT · Agile Delivery · Governance · Adoption Tracking

Data Engineering

SQL (Advanced) · Amazon Redshift · Stored Procedures · Window Functions · Star Schema · Performance Tuning · Snowflake · Presto, Snowflake

Data Sources

SQL Server · SAP · SharePoint · Oracle · Veeva · Kite Konnect · Smartsheet · REST APIs, Arx, Accredo

Cloud & AI

Azure · Claude AI Integration · Microsoft Fabric (learning) · Python Automation · ServiceNow

Domain Knowledge

Pharma Analytics · Enrollment Funnels · HCP/HCO Analytics · CAR-T Therapy · Call Activity · Payer Mix · Manufacturing KPIs, FMCG

PROFESSIONAL EXPERIENCE

ZS Associates — Pune, India

Apr 2024 – Present

Associate – Power Platform Services | US Pharma & Biotech (Confidential Clients)

- Dual role: 50% Senior Power BI Developer (consulting) + 50% Data Engineer on Amazon Redshift and Snowflake across two simultaneous US client engagements.
- Owned end-to-end BI delivery as primary Power BI POC — requirements, data modelling, DAX, RLS architecture, deployment, governance, and post-go-live support.
- Delivered 8 enterprise dashboards in 3 months with 80%+ user adoption at go-live across a 150+ user national field sales force.
- Architected Dynamic RLS across Territory → Region → Area → National hierarchy (91 territories) enabling secure self-serve analytics for all user levels.
- Completed 50% of a 6-month Redshift data engineering plan in 2 months — SQL tables, stored procedures, and window functions independently.
- Reduced dashboard load time from 45+ seconds to under 8 seconds by resolving Cartesian joins, non-indexed columns, and bidirectional relationships in Power Query.
- Automated dataset refresh, user access, and report migration via Python + ServiceNow; introduced Deployment Pipelines Dev→Test→Prod — zero unplanned production incidents.
- Managed 13 live dashboards concurrently; mentored 1 junior developer; delivered 10–15 POCs. Received 'Pat on the Back' Award.

Celebal Technologies — Pune, India

Jan 2022 – Mar 2024

Power BI Developer | Manufacturing & Multi-Industry (Indian & US Clients)

- Developed enterprise Power BI dashboards for Vedanta Aluminium (manufacturing KPIs, production metrics, operational reporting) and other clients across healthcare and retail.
- Gathered and translated requirements directly from Indian client stakeholders at Vedanta, converting business needs into structured DAX models and dashboard wireframes.
- Integrated data from SQL Server, SAP, SharePoint, Smartsheet, and Oracle into optimised star-schema semantic models with advanced DAX, time intelligence, and drill-through.
- Managed Power BI Service operations: gateway configuration, scheduled refresh, deployment, and end-user training.

KEY PROJECTS

Field Sales Reporting · US Pharma Ophthalmology · ZS Associates

- Architected and delivered an 8-page self-serve analytics platform for a national US pharma field force — covering patient enrollment funnels (new, continuing, reactivated), HCP 360° engagement (NPS, call frequency, target reach, consistency %), payer mix (Medicare, Medicaid,

Commercial), speaker program ROI, geography performance heatmaps with Top/Middle/Bottom 25% national average benchmarking, and silent prescriber identification across Territory, Region, Area, and National hierarchies.

- Built an optimised star-schema semantic model in Power BI Desktop sourced from Veeva + ZS Data Warehouse via Presto → Amazon Redshift; authored complex Advanced DAX measures with time intelligence, Power Query (M) transformations for data shaping and incremental refresh, conditional formatting, custom drill-through pre-call cards, bookmarks, tooltips, and an Azure Maps visual for national territory coverage — validated using DAX Studio and Tabular Editor.
- Implemented Dynamic Row-Level Security (RLS) across a 4-tier geography hierarchy; enforced workspace governance via Deployment Pipelines (Dev→Test→Prod) with UAT/SIT sign-off gates; established post-production data validation checklists and user guides — achieving zero defects at go-live and 80%+ adoption across 150+ field users within the first month.

Field Performance Dashboard • US Biotech CAR-T Therapy • ZS Associates

- Designed and delivered a CAR-T therapy patient journey analytics platform tracking Registrations, Apheresis, Deliveries, and Cancellations with attainment vs goal, QTD trends, and ATC segmentation (Gold/Silver/Bronze); built activity analytics covering total calls, in-person calls, MM pod meetings, target reach, call frequency, Rep Triggered Emails, and Avg Calls Per Day with Weekly/Monthly/Quarterly toggle — alongside customer list (ATCs + HCPs), pre-call card, Azure Maps cluster marker map, and referral pattern trend charts for 3L→4L and 4L+→5L+ patient flows.
- Engineered the semantic model using composite mode (Import + DirectQuery) on Amazon Redshift with incremental refresh; performed Vertipaq optimisation using DAX Studio to reduce model size; authored Advanced DAX measures for rolling calculations, dynamic segmentation, and custom time intelligence; built Power Query pipelines with query folding to minimise data load — resolving bidirectional relationship fan-out and non-indexed filter columns that were causing high cardinality scan performance issues.
- Diagnosed and resolved a critical 45-second → under 8-second load time regression by identifying Cartesian joins in Power Query transformations, eliminating bidirectional relationships, and restructuring filter direction; delivered through full Agile sprint cycle with stakeholder workshops, business requirements documentation, UAT/SIT sign-off, and Deployment Pipeline promotion — confirmed by client in production validation.

Manufacturing BI Platform • Vedanta Aluminium • Celebal Technologies

- Delivered enterprise Power BI dashboards for Vedanta Aluminium — a large-scale Indian manufacturing client — covering production KPIs, operational throughput, plant-level performance, and supply chain metrics; acted as the primary client-facing BI developer, running requirements workshops directly with business stakeholders and translating operational needs into structured KPI definitions, data model wireframes, and dashboard specifications.
- Built an optimised semantic model integrating data from SQL Server, SAP, SharePoint, Smartsheet, and Oracle into a star-schema structure; developed Advanced DAX measures for time intelligence, rolling aggregations, and variance calculations; applied conditional formatting, bookmarks for navigation, drill-through reports for plant-level detail, and tooltip pages — validated model performance and query efficiency using DAX Studio.
- Managed end-to-end Power BI Service operations including gateway configuration, scheduled refresh, deployment pipeline setup, and post-deployment user adoption — conducted end-user training sessions, produced user documentation, supported UAT and SIT testing cycles, and maintained report governance across multiple dashboards in a multi-client delivery environment.

ARCHITECTURE & PERFORMANCE WINS

- Performance: Summary page load 45+ sec → under 8 sec — Cartesian joins in Power Query, non-indexed filter columns, and bidirectional relationships identified and resolved; confirmed in client UAT.
- Data Model: Centralised 12+ scattered measure tables into functional groups (Performance, Activity, Enrollment, Payer) — ~30% reduction in duplicate measures, zero conflicting KPI definitions across the platform.
- Architecture: Recommended retaining Amazon Redshift over proposed Snowflake migration (saving ~3 months pipeline overhead); introduced Deployment Pipelines Dev→Test→Prod — zero unplanned production incidents post-implementation.

CERTIFICATIONS

PL-300 Power BI Data Analyst Associate | **DP-500 Azure Enterprise Data Analyst Expert** | **AZ-900 Azure Fundamentals** | **DP-900 Azure Data Fundamentals** | **SQL Basic • Intermediate • Advanced**

EDUCATION

B.Tech – Information Technology | Galgotias College of Engineering & Technology
GPA: 8.5 / 10

Aug 2018 – Apr 2022

KEY ACHIEVEMENTS

- 'Pat on the Back' Award — ZS Associates. Formal appreciation from Practice Area Managers for delivery excellence, client ownership, and above-expectations performance.
- Sports: Badminton Doubles, Foosball, Cricket — reflecting team-first mindset and competitive drive.
